

**Properties of 3D Shapes**

**cube**

- six faces
- six square faces
- eight vertices
- twelve edges
- dihedral angles  $90^\circ$
- platonic solid
- eight corners

**tetrahedron**

**octahedron**

**dodecahedron**

**icosahedron**

**cuboid**

**sphere**

**triangular prism**

**cylinder**

**pyramid**

**cone**

**hemi-sphere**

- two faces
- one circular face
- one edge
- no vertices
- no corners
- half a sphere

## 3D Shapes

Every 3-dimensional shape has three measurements to describe it: **height, length and width.**

## 3D Shapes

### Faces

A face is one of the flat sides of a three-dimensional shape.

A cuboid has 6 flat faces. This cuboid has 2 square faces and 4 rectangular faces.

## 3D Shapes

### Edges

An edge is the line where two faces touch.

A square-based pyramid has 8 edges.

## 3D Shapes

### Vertices

Vertices are the corners of a 3D shape, where three or more edges meet.

A single corner is called a **vertex.**

A triangular prism has 6 vertices.

## 3D Shapes

### Prisms

The two opposite faces are the same shape.

If you cut a prism anywhere along its length, the two opposite faces will remain the same shape and size as the original.

## 3D Shapes

### Prisms

A prism always has the same shape at either end.

A prism will always have rectangular faces on the sides.

## 3D Shapes

### Polyhedrons

Polyhedron is a 3D shape with flat faces and straight edges.

A **regular polyhedron** is a 3D shape with all the faces the same shape.

## 3D Shapes

### Dodecahedrons

This is a **dodecahedron.** It is a regular polyhedron.

Its 12 faces are all regular pentagons.
